Conservation and the Genetics of Populations

Fred W. Allendorf, Gordon Luikart

Conservation and the Genetics of Populations Fred W. Allendorf, Gordon Luikart

Conservation and the Genetics of Populations gives a comprehensive overview of the essential background, concepts, and tools needed to understand how genetic information can be used to develop conservation plans for species threatened with extinction. * Provides a thorough understanding of the genetic basis of biological problems in conservation. * Uses a balance of data and theory, and basic and applied research, with examples taken from both the animal and plant kingdoms. * An associated website contains example data sets and software programs to illustrate population genetic processes and methods of data analysis. * Discussion questions and problems are included at the end of each chapter to aid understanding. * Features Guest Boxes written by leading people in the field including James F. Crow, Nancy FitzSimmons, Robert C. Lacy, Michael W. Nachman, Michael E. Soule, Andrea Taylor, Loren H. Rieseberg, R.C. Vrijenhoek, Lisette Waits, Robin S. Waples and Andrew Young. Supplementary information designed to support Conservation and the Genetics of Populations including: * Downloadable sample chapter * Answers to questions and problems * Data sets illustrating problems from the book * Data analysis software programs * Website links

An Instructor manual CD-ROM for this title is available. Please contact our Higher Education team at HigherEducation@wiley.com for more information.
